### Others

- Administrative auto monitoring system with secured video streaming surveillance Tablet to monitor each Election Polling Booth by the OEM.
- Load sharing cloud CDN setup to ensure 100% video stream availability by the OEM.
- 24 X 7 dedicated customer support by the OEM

### **Schedule B**

#### **IP camera based webcasting**

The objective of webcasting through IP camera based webcasting is to explore optional technology. The Collector/DEO reserve full right to use either IP camera based solution or Tab based solution at any or all the polling station chosen therefore depending upon the principles of economy, technical feasibility and practicability. The bidder shall provide:-

- (a) IP based low light indoor camera with:
  - Minimum 32GB memory for edge recording
  - Support minimum sensor resolution of 1280 X 1024
  - Support image frame rate (minimum) of 30FPS @ 116 X 120, 30FPS @ 320 X 240, 30FPS @ 640 X 480, 10FPS @ 1024 X 768,
  - 1/4" progressive CMOS sensor
  - Supported video resolution 1.3m: 1024X768 512X384 256X192: 0.3M: 640X480 320X240 160X120
  - (Samba client) Recording to NSA directly, 3GPP support, UPnP/AV support, WAP support, HW Motion Detection
  - Preferably onvif supported.
- (b) Camera viewing license
- (c) Static IP based broadband connectivity, minimum 256KBPS upload per camera. However, bidder to decide the bandwidth requirements per camera and quite accordingly.
- (d) One 20MBPS internet link at control room CEO, Daman & Diu office with a redundant link.
- (e) Webcasting software.

- (f) Bidder to install UPS or equivalent power source inbuilt 2 hrs backup at each location for powering each camera and broadband routers. For PSs without power supply (which would be rare), alternative power source like inverter or UPS should be provided for fully day recording
- (g) Manpower to configure and install camera and internet equipment at each polling location, as directed by the office of DEO
- (h) Bidder to provide secured network and ensure that footages created from these cameras is /are not leaked.
- (i) The webcasting software shall allow at least three concurrent viewing of same cameras from three different locations.
- (j) The bidder shall provide setup at each CEO, DM/DC & IGP office for their viewing of their own constituencies.

The camera shall be directly connected to ADSL CPE to any broadband with static IP. The suggested bandwidth per camera is 256KBPS upload (however, bidder to estimate the actual requirements). The video output of the camera will be streamed directly to State HQ/ Control/ Room. Recording at the polling booth shall be in the memory card of the camera directly.

At the State HQ/Control Room, a video wall is required to be set up by the bidder to all polling station and display unit will be used to view image from all the camera.

The Bidder shall install video monitoring & camera control software, so that multiple cameras can be viewed at a time. If required, the software shall enable operator to enlarge, freeze, records to take snapshot.

Bidder shall install terminate / install multiple internet link to firewall on Load Balancing and failover mode. Bidder shall connect all the console PC shall be connected to firewall through central switching console / gigabit Ethernet switch. The console pc shall have dual display card, one to be connected to monitor and another to video switch. (Video switch shall be used to toggle streams of different cameras).

Bidder shall install NAS at control room for recording purpose. It is recommended that minimum 32 TB of usable storage, with RAID 0, 1 & 5 be installed per 1000 camera recording.

### **Scheduled C** **Vehicle based Election Monitoring**

#### **Bidder shall provide:-**

Vehicle based live streaming solution at places directed by the CEO office.

Tab or IP based camera.

The tab/camera that shall be mounted on the vehicle.

Network video recorder –which should supported video streaming with multiple SIM cards;

It should support view on local LCD in side vehicle and control the camera.

It should support auto local recording in case of internet loss for up to 8 hours of storage.

Pre-installed application which will auto start on the time of event and will also auto recover in case of internet connectivity loss and reestablishment.

Live streaming shall support minimum speed of as low as 100 kbps.

Minimum 600 MBps in /out bandwidth shall be on the cloud.

Primary server shall be located in India/(Daman).

Cloud site and disaster recovery site shall completely separate from one another.

Shall include completed failover setup for VMS cloud.

**Scheduled -D**  
**Mobile live Tracking System**

The scope of the project is to create a GIS based application. The application should enable office of the CEO, DEO, IGP and SP to monitor the polling procedure taking place in different polling booths, through sector officer.

The application should be:

- Web based application
- Mobile based application.

The mobile based application should be connected with the web application, i.e. both the application will run in parallel. The application should enable the sector officer to prepare various report / log of visiting polling station safely before the election on the day of polling, completion of the election procedures including mock poll, two hourly polling report to DEO and CEO office, reporting back to the receiving centre after polling is over, cases of EVM failure arise, polling restoration and status on disruption due to law and order or other reasons at the polling stations.

**Feature of the Mobile application:**

- The Mobile application should have tabs to send one touch information.
- The mobile application should multiple picture upload capacity. picture can be uploaded from the gallery or by directly taking picture by the phone camera.
- The application should be able to store latitude longitude values of the phone at periodic time intervals.
- The application should send the location data to the central server using GPRS/ mobile internet / wi – fi
- The application should be built to run on Android 4.0 and above operating systems.
- The application should use sql as database
- The application have offline data storage capability. In case of problem in internet access data can be stored in the device itself.
- Later when internet comes the application should automatically update the data on the central server.
- There should be provision to lock the app from remote central location in case of any emergency.

**Feature of Web application:-**

- The application will be online application and should be accessible from anywhere using internet connection.
- The application should have real time sync with the central server and the mobile application.
- The application should have be GIS application showing the polling booth under particular PC.
- The GIS application should be developed using Google Maps API.
- The system should have tracking mode where live tracking of sector officers / mobile phone can be seen.
- The application should tracking based on different time periods.
- The application should be developed in . net language and should have SQL server 2008 as database.
- The system should automatically refresh in short periodic intervals.

## Implementation

The software will be hosted by the Bidder. Server Hosting cost should be provided by the bidder for 3 months.

The Bidder has to provide 2 Manpower for training and support at both district of this constituency / locations as required.

The Manpower should be given for 3 days.( 1 days before and on the Polling Day)
